On the spaces and movement of monsters: The Itinerant crossings of Gef the talking mongoose

Abstract

Geographical enquiries of the monster and the monstrous have increased in recent years. Through the accounting of a particular monster that emerged in the Isle of Man in the 1930s, I seek to contribute to these debates. The monster detailed in this paper underscores the argument that the power of the monster lies in both their proximity to familiar spatial and cultural codings, and their distance in the unfamiliarity they perform. However, I argue that the geographical accounts of the monster must focus their attention not only on their ambiguous status, but how they are constituted through mobility and movement. It is the constant itinerancy in-between and in-the-between wherein the monster finds its disruption and potential. Furthermore, in exploring monstrous modes of mobility, I argue the monster is best understood as an itinerant crossing that is incessantly and continually emergent. I finish by reminding those interested in monstrous geographies that whilst these strange beings may act as sources of hope and potentiality, geographers must not lose sight of how the monster still has the capacity to warn and to bite.

Monster, Monstrous geographies, Mobility, Supernatural, Isle of Man

Introduction

The familiar exclamation ‘Here be Monsters!’ has been, and continues to be, a common socio-cultural spatial motif for the unknown and the feared. Such familiar geographical adages reveal the monster to be constituted through liminal spaces at the edge of, and with the power to disrupt, the known world: as Dendle puts it, humanity has “consistently and ubiquitously populated its border spaces with fascinating and sometimes threatening creatures.”¹ Fuelled by a desire to explore this and others spatialities, the monster has figured in a number of geographical enquiries in recent years.² In particular, recent scholarship has revealed that monsters are both liminal and yet very much in our midst through residing in places and practices less peripheral: backyards and puddles, scientific laboratories, environmental management strategies and (of course) art, literature and popular culture, are all home to the monster.³

1
2
3 How can we make sense of the monster? In overview, monsters are both representative of something and
4 perform a disordering or a disturbance. Historically, the monster was representative of revelation: its very
5 appearance a form of warning or portent. Indeed the etymology of the word 'monster' indicates this:
6
7
8
9

10
11 "It comes to English from the Latin *monstrum*. *Monstrum*, in turn, is derived from a corruption of
12 *moneo* by *monstrare*. This links 'advice', 'reminder' or warning with 'showing'. As such, monsters
13 reveal something. To meet a monster is to encounter something surprising in the world; it is to
14 discover the world is not as 'ordinary' or 'familiar' as it might have seemed."⁴
15
16
17
18
19

20
21 On the one hand, the monster could demonstrate a moral transgression or an impending calamity fashioned by
22 God's wrath. On the other, the monster could reveal the fecundity and perfection of nature as God's creation,
23 and hence "served to emphasise by force of contrast the rightness of most forms."⁵ Figuratively, the monster,
24 through its abnormality, acts to patrol and set the precincts of normality: the monster acts as a constitutional
25 outside, contrasting to that which is regular, correct and proper. The policing of the normal is achieved through
26 and against the monster's potential to disrupt and threaten. As anomalous and abnormal, monsters require
27 calculation, categorisation and control: they become "an object for explanation, a matter to be curtailed."⁶
28 Under the Enlightenment, the study of monstrous abnormalities became a science in itself – teratology – as the
29 previous Ancient and medieval symbolism of monsters as warnings gave way to the need to classify. Yet as
30 Shildrick explains, "Even when the long-standing belief in the supposedly portentous nature of monstrosity lost
31 favour in the face of more naturalistic explanations of Enlightenment science, the requirement of interpretation
32 remained."⁷
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47
48

49 Key to the monster's enduring longevity is its ambiguous status or the "category crisis" it produces.⁸ As such,
50 the monster is never wholly Other in that we recognise both our difference from, and connection and similarity
51 to it: the monster's status is both distant and proximate. One only needs to think of Japanese monster Godzilla
52 to exemplify this: abnormal and threatening in its size, appearance and actions, Godzilla's ontology lies in
53 humanity's hubris in nuclear power and weapons, and thus its origins are of our own making. As Shildrick
54
55
56
57
58
59
60

1
2
3 states: "In seeking confirmation of our own secure subjecthood in what we are not, what we see mirrored in
4 the monster are the leaks and flows, the vulnerabilities in our own embodied being. Monsters, then, are deeply
5 disturbing: neither good nor evil, inside nor outside, not self or other."⁹ The partial recognition of ourselves in
6 the monster, and the un-decidability that ensues, leads to further ambiguous responses. The monster is thus an
7 object of fear *and* fascination; it entices *and* it horrifies, it enthrals *and* it repulses. Thus here, the monster
8 moves from being representative or demonstrable, to a more performative role, as it coordinates indefinite
9 affects and reactions.
10
11

12
13
14
15
16
17
18
19
20 Indeed, the performative and affective potential of the monster is something that recent human geography has
21 interrogated. Drawing on Haraway, and the monster's ability to render radically impure modern classificatory
22 systems, and Derrida's notion of the monstrous arrivant, as a vital unknown force that appears unannounced,
23 geographers have been keen to explore how the monster can be a figure of renewal and even hope.¹⁰ The
24 monstrous arrivant then is unforeseen and unforeseeable, its appearance is often sudden and always without
25 prediction. Indeed, to predict the monster is to already know it, to have calculated and comprehended it in
26 advance of its arrival, and in so doing have tamed and undermined its potential. The very status of the monster
27 is transformed here into something promissory, as the improbable allows us to sense the force of things not yet
28 realised: as Dixon and Ruddick argue "We have come to rely on the monstrous to undertake a different kind of
29 labor, not of maintenance, but upheaval, a kind of renewal".¹¹ Here the monster speaks to the future *as future*;
30 to save its potential the monster is left deliberately unknowable, as Derrida has it, "A future that would not be
31 monstrous would not be a future; it would already be a predictable, calculable and programmable
32 tomorrow."¹²
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47
48

49 The monster, therefore, has moved from something that warns of transgression, to the object of intellectual
50 explanation, to a figure that holds out promissory unknown futures laden with potential. Through this
51 movement, the monster has disturbed, transformed and yet continues to delight and enchant. Indeed, this
52 paper argues and highlights that it is precisely *movement* and *mobility* that are central to understanding the
53 geographies of monsters and monstrous geographies. As such, as well as contributing to debates that explore
54
55
56
57
58
59
60

1
2
3 simultaneous distance and proximity, this paper's key argument details how we need to become more attuned
4
5 to monstrous geographies as composed and constituted through movement and mobility. Such monstrous
6
7 mobility and movement occurs between places and spaces, but I also argue here that the monster comes into
8
9 being through movement in-between and *in-the-between*. This movement is charted and detailed through the
10
11 story of a particular monster which is used as a catalyst for discussing its wider significance and its analytical
12
13 value for the study of monsters. The monster that I wish to trace here joins those explored by others in its
14
15 ability to disclose and critically deform the security of order and relationality. Yet accounting for these
16
17 disruptions through spatialities of movement and mobility allows one to realise the power of monsters
18
19 differently and again. The paper finishes by challenging the hope that for many the monster performs: I argue
20
21 that we must continue to recognise the less-than-hopeful future wrought by the monster, and thus restore and
22
23 revive its portentous status. I begin therefore by telling this monstrous story in detail, with a watchful eye on
24
25 the power of the monster to disrupt through its improbable mobility.
26
27
28

30
31

32 **Monstrous disruptions through mobility I: classification, affect and propriety.**

33
34
35
36

37 The place for this monstrous tale is the Isle of Man, a thirty two mile long island in the Irish Sea at the
38
39 geographical centre of the British Isles and a crown dependency of the United Kingdom. The island has and
40
41 continues to contain its (perhaps more than) fair share of folkloric monsters and anomalous creatures.¹³ For
42
43 example, residing in the shadows of Greeba Mountain to the West of the capital Douglas lives the famous
44
45 Buggane, an enormous subterranean ogre-like creature covered with black hair and sporting viscous claws and
46
47 tusks renowned for ripping the roof off the local church, St. Trinians (which has yet to be repaired). In a less
48
49 violent spirit, the Phynodderree or Fynoderee is a brownie or sprite that, in payment for food and drink,
50
51 performs agricultural tasks for local farmers; and the Arkan Sonney, a long haired pig or hedgehog considered
52
53 lucky if caught. This local bestiary shares the island with ghosts such as a spectral black dog, the Moddey Dhoo,
54
55 said to haunt Peel Castle on the West coast; and fairies, locally known as 'themselves', which inhabit Fairy Hill
56
57 at Cronk Howe Mooar and Fairy Bridge on the A5 road to Castletown in the South.¹⁴ However, whilst the
58
59
60

1
2
3 monster that takes centre stage in what follows shares some characteristics with this supernatural panoply, it
4
5 arguably succeeded in, through its mobile infamy and the extent of its travels, transcending and having greater
6
7 geographical reach than most of the marvels told of in local folklore.
8
9

10
11 It could be assumed, that the early part of the twentieth century and the specific period of this monster's
12
13 emergence – the 1930s – would be a time when such folkloric, superstitious and mythic phenomenon would
14
15 have been all but eradicated by the various forces of disenchantment.¹⁵ Yet, on the Isle of Man, this period was
16
17 one where the Moddey Dhoo was sighted (in 1927 near Ramsey), one where ghostly spirits manifested
18
19 signalling death (so called 'death apparitions'), fear of fairy abductions still held sway, and in Glen Maye, near
20
21 where this monstrous case study takes place, a water spirit was said to haunt.¹⁶ Indeed, on a wider scale, the
22
23 popularity of spiritualism was still strong over in the UK, after seeing a resurgence after the First World War,
24
25 well known mediums such as Helen Duncan were in strong demand (leading, in 1944, to her being the only
26
27 person charged and convicted under the 1735 Witchcraft Act), and the hauntings of Borley Rectory were
28
29 making headlines in *The Daily Mirror*. Furthermore, the Society for Psychical Research continued to apply
30
31 scientific rigour to their investigation of extraordinary human powers, occult and esoteric ideas groups still
32
33 flourished, and the ideas in which they dealt remained an influence on artistic Modernism (such as Schoenberg
34
35 in music, Kandinsky in art and Yeats in literature).¹⁷ In popular culture, Hazelgrove remarks "Along Blackpool's
36
37 seafront in 1937, faith healers, astrologers and herbalists jostled with Buddhist healers and snake charmers",
38
39 and Mass-Observation records the meetings of groups like the Mazdaznans in Bury, outside Manchester, where
40
41 New Thought, esotericism and vegetarianism freely mixed.¹⁸ It would seem, therefore, that the cultural climate
42
43 was still ripe for the appearance of something marvellous, strange and seemingly unknown.
44
45
46
47
48

49 On February 12th 1932 a Miss Florence Milburn, resident of Peel on the Isle of Man, wrote to the famous ghost-
50
51 hunter and psychic investigator Harry Price. Price described how:
52
53
54
55
56
57
58
59
60

1
2
3 “My correspondent informed me that a farmer friend of hers, a Mr. James T. Irving, had discovered in
4
5 his house an animal which, after a little coaxing, had developed the power of speech, and was
6
7 practically human, except in form.”¹⁹
8
9

10
11 Price wrote to Mr. Irving, who confirmed the story as set out by Miss Milburn: on the 13th of September 1931.
12
13 Mr. Irving, a former travelling salesman, had heard tapping noises coming from the attic of the farmstead he
14
15 shared with his wife Margaret and 13 year old daughter Voirrey [INSERT FIGURE 1 HERE]. Over the next few
16
17 nights the tapping was accompanied by what Mr. Irving described as “animal noises” consisting of “barking,
18
19 growling, spitting and persistent blowing.”²⁰ Undertaking a search for the source of the noises, the farmer
20
21 found nothing. The noises seemed to originate from behind the wooden panelling that lined the walls of the
22
23 farmhouse in Doarlish Cashen near Dalby on the west of the island. The farmer attempted to get rid of “his
24
25 unwanted guest [using] gun, trap, and poison in turn, but the knowing creature eluded them all.”²¹ Irving then
26
27 revealed how:
28
29

30
31
32 “...something more happened that made us speechless with amazement and apprehension. This
33
34 strange animal – whatever it was – was making gurgling sounds like a baby trying to talk for the first
35
36 time! It sounded like this – ‘DOMADOMADOMA-BLUMBLUMBLUM.’”²²
37
38
39
40

41 The intangibility of the thing behind the wooden panelling was echoed by meaningless sounds it uttered.
42
43

44
45 A few days later Irving decided that the creature might be able to imitate animal sounds: the thing obliged. He
46
47 wrote, “In a few days, we had only to name the particular animal or bird, and instantly, always without error, it
48
49 gave the correct call.”²³ Within a few more days the creature was able to repeat nursery rhymes read out by
50
51 Voirrey. Questions flew between the family and the thing now able of human speech in a voice “extremely high
52
53 pitched, above the human range, in a clear, sweet tone.”²⁴ Immediately, we see the thing’s first monstrous
54
55 disruption: the creature transgressed and supplemented the rupture that holds language as the “*uber* signifier”
56
57 of the ontological distinction of human and non-human.²⁵ The monster moved between both the material
58
59
60

1
2
3 bounds of wall and wood panelling, and ontologically between human and non-human. Key to the monster's
4
5 constitution therefore, is the *movement in* such in-between spaces, both material and symbolic.
6
7

8
9
10 The thing demanded knowledge and its questions answered on all manner of subjects. The Irvings named it, or
11
12 it names itself, Gef – it is unclear who named who. The Irvings demanded to know more; in response Gef
13
14 stated:

15
16
17
18 "I am an earthbound spirit."²⁶

19
20 "I am not a spirit. I am a little extra, extra clever mongoose."²⁷

21
22 "I am a ghost in the form of a weasel and I'll haunt you"²⁸

23
24 "I am a freak. I have hands and I have feet, and if you saw me you'd faint, you'd be petrified,
25
26 mummified, turned into stone or a pillar of salt."²⁹

27
28 "I am the Holy Ghost"³⁰

29
30 "I am the fifth dimension, I am the eighth wonder of the world, I can split the atom"³¹

31
32
33
34 James Irving stated, "Whatever Gef is, animal only, or spirit in this form, there has never, I am sure, been
35
36 anything like it on this earth before."³² Thus Gef became monstrous in his ambiguous, imponderable and
37
38 supplementary ontology – he was an animal capable of speech and a desire for human learning and knowledge.
39
40 This monstrous state was further accentuated through his self-claimed grafting of supernatural origins and
41
42 abilities – he was a spirit, a weasel, a ghost with human hands and feet, and a mongoose that could talk and
43
44 imitate animals and birds. Through his ambiguous and seemingly impossible conflation of human and
45
46 nonhuman, natural and supernatural categories, Gef the talking mongoose disrupted the normalised order of
47
48 nature and human/non-human dualities.³³ Accordingly, this disruption required action to try to comprehend:
49
50 Price dutifully sent a friend, a Captain Dennis, to the Isle of Man to investigate.³⁴
51
52

53
54
55 The Captain arrived on February 26th 1932. He spent a few days on the island and came away with scant
56
57 evidence, apart from hearing a shrill voice shouting 'Go away, who is that man?', being ordered by Gef to shout
58
59
60

1
2
3 out 'I *do* believe in you Gef', and witnessing a large needle being thrown at a teapot. He returned to London,
4
5 yet Gef continued to interrupt everyday life at Doarlish Cashen with his constant enquiries, knocking, thumping
6
7 and tricks. On one occasion, Irving remarked "he commenced talking at 11.0 p.m. and he continued until 3.0
8
9 a.m., without a stop. Sleep was impossible, and at 3, I said I wished he would go. He said "I am not going to do
10
11 what you wish. I can stay till 5, if I like."³⁵ As time wore on the Irvings grew accustomed to Gef, but admitted
12
13 "[we] can influence, but cannot control him entirely."³⁶ Irving stated how the family only caught glimpses of
14
15 Gef, yet they were able to describe him as having a "yellowish tinge, like a ferret. The tail is long and bushy and
16
17 tinged with brown. In size, it is about the length of a three-parts grown rat in the body, without the tail."³⁷

18
19
20
21
22 Between 1932 and 1936 Gef's activities and abilities grew ever more varied: he took an active interest in
23
24 transport of different kinds; learnt to read by hiding in class at a local school; became fascinated by current
25
26 affairs by reading newspapers over James Irving's shoulder; via the farmer's instruction and what he picked up
27
28 around the Island, he became conversant not only in Manx, but German, French, Italian, Spanish, Arabic,
29
30 Russian, Yiddish and Welsh, as well as the basics of sign language; he developed a 'considerable' knowledge of
31
32 medical terms; and claimed, "If you knew what I know, you'd know a hell of a lot".³⁸ Other activities included a
33
34 fondness for singing, listening to the gramophone and bouncing a ball in time to the music in his 'sanctum' – a
35
36 boxed-off partitioned area of Voirrey's bedroom.³⁹ In return for his favourite foods of "chocolates, bananas,
37
38 biscuits, lean bacon, sausages, potato pie, etc.", Gef provided the family with rabbits.⁴⁰

39
40
41
42
43 His attitude to the Irvings varied over the years from warmth and affection to sarcastic observations and
44
45 outright hostility; prone to angry outbursts and actions, he told the Irvings "You don't know what mischief I
46
47 could do if I was roused. I could kill you, too, if I wished, but I won't."⁴¹ In turn, echoing his monstrous
48
49 misbalancing of both human and nature, witnesses' reactions moved between marvel *and* incredulity, and
50
51 senses of delight *and* wonder: as Irving summated "Our experiences are so wonderful and incredible, that I
52
53 doubt if the like has ever occurred before on this earth."⁴² Gef's monstrosity then, "cannot be confined to the
54
55 place of the other; [he] is not simply alien, but arouses the contradictory responses of denial and recognition,
56
57 disgust and empathy, exclusion and identification".⁴³ It is this simultaneous proximity and distance to the
58
59
60

1
2
3 human witnesses, and the similar ambiguous reactions he engenders, that provides for Gef's monstrosity: "It is,
4 then, in [monster's] failure to wholly and only occupy the place of the other that such monsters betray the
5 fragility of the distinctions by which the human subject is fixed and maintained as fully present to itself and
6 autonomous"⁴⁴ More precisely, it is in his spatial constitution as mobile, through continually moving betwixt
7 and between ontological classifications and consistent affective states, that Gef finds his monstrous
8 geographical being. The monster here is inherently spatially mobile through his movement in and between
9 multiple formations and, furthermore, the impact this movement has.

10
11
12 This performative spatial disclosure through movement continued to exert a pressure to investigate or to
13 stabilise. Consequently, Price and his friend, Richard Stanton Lambert, editor of *The Listener* magazine and
14 governor of The British Film Institute, visited the Isle of Man in an attempt to make sense of Gef. They arrived in
15 Douglas on July 30th 1935 and made their way up to the farm at Doarlish Cashen. Yet prior to their arrival Gef
16 had gone missing, exclaiming before he left "Captain Dennis can come, but not Price. He's got his doubting cap
17 on"⁴⁵, and describing Price as the "man who puts the kybosh on the spirits."⁴⁶ On meeting Margaret and Voirrey
18 the investigators waited for Gef to make himself known. Price then recalled how:

19
20
21 "I addressed a little speech to the four walls of the room, hoping Gef would hear me. I pointed out that
22 we had come a long, long way on his account and that we were entitled to some manifestation: a few
23 words, a little laugh, a scream, a squeak, or just a simple scratch behind the panelling. I even invited
24 him to throw something at me. But all to no purpose: Gef was definitely not in a talking mood."⁴⁷

25
26
27 Gef's unpredictability and improbability eluded Price and Lambert's attempt to impose order and stability. They
28 returned to their hotel and the disturbing power of the monstrous to be registered in ambiguous reactions of
29 wonder and confusion was revealed again:

30
31
32 "Neither Mr. Lambert nor I slept very well. The mongoose problem obsessed our minds and made
33 sleep difficult. Was the whole affair a fraud from A to Z? Was it a plot (lasting four years) to fool the

1
2
3 countryside? If so, what was the motive? Were the Irvings engaged in a clever and picturesque
4
5 conspiracy? Was there any sort of animal at all? Was there any real evidence whatsoever that Gef had
6
7 been heard? These and similar questions raced through my brain.”⁴⁸
8
9

10
11 Gef baffled, he raised questions that remained unanswered and affected a misbalancing of self-composure. In
12
13 so doing he performed a breach of the seemingly coherent and rational subject. James Irving, for example, was
14
15 troubled by the pervading energy of monstrosity that organised his thoughts and actions: in his
16
17 correspondence, he constantly sought assurance that his fantastic accounts were not policed as the
18
19 outpourings of a deviant or becoming-abnormal mind, commenting “You have seen me, my wife and daughter
20
21 and you will know that none of us have delusions, illusions or hallucinations on any subject.”⁴⁹ In 1934, he
22
23 sought to stress his role as mere witness: “There are hundreds of similar incidents to this, and others besides
24
25 and if we have had these most extraordinary, amazing and incredible experiences, they came to us, we
26
27 certainly did not go looking for them.”⁵⁰ In Irving’s letters to Dennis and Price the troubling and uncertain
28
29 itinerant origins of Gef are a constant thematic: “the brain, intellect and knowledge is that of a human being
30
31 and a superhuman at that and if he is not supernatural, he is certainly uncanny.”⁵¹
32
33
34
35
36

37 In 1936 Price and Lambert co-authored *The Haunting of Cashen’s Gap: A Modern ‘Miracle’ Investigated*.

38 **[INSERT FIGURE 2 HERE]** The book maintained Gef’s monstrous ambivalence and disruption. In the
39
40 introduction, Price and Lambert outlined their position as in-between definitive accounts:
41
42
43
44

45 “To believers it will represent a proof of miracle; to sceptics a lesson in the laws of evidence. Some will
46
47 cast it nonsense from first to last; others will admit it to be at least as good as most ghost stories.
48
49 Throughout we have sought to avoid mere credulity on the one hand and prejudiced scepticism on the
50
51 other.”⁵²
52
53
54

55 The monster’s power was not limited to improbable movement in-between emotional states and classificatory
56
57 criteria. Upon the reception of Price and Lambert’s book, Gef’s monstrous mobility was underlined: Gef moved
58
59
60

1
2
3 from the culturally coded periphery to the centre, and in-so-doing his impact gained greater geographical
4 reach. This movement began on February 7th 1936, when Sir Cecil Levita and Mr. William Murray had lunch at
5 the Carlton Club in London. Sir Cecil was a former Chairman of the London County Council and Home Office
6 Advisor on film censorship and through his wife's role with the British Film Institute he was an acquaintance of
7 Richard Lambert. Murray, who had previously been Director of Information and Publications at the BBC and
8 therefore Lambert's superior at *The Listener*, later reported how he found Sir Cecil at the meeting:
9
10
11
12
13
14

15
16
17
18 "I was bewildered and astonished by what I heard ... His demeanour seemed to be one of unusual
19 tensity, and perhaps almost of strain. He showed a desire to ram home points, and his gestures of
20 emphasis were frequent."⁵³
21
22
23
24

25
26 The subject of their discussion, which so affected Sir Cecil's department, was Lambert's investigation into the
27 talking mongoose. Sir Cecil maintained that because of his visit to the Isle of Man and speculations about Gef,
28 Lambert was unfit to remain a governor of the BFI. During the meeting Sir Cecil "touched his forehead when he
29 was speaking of Mr. Lambert to indicate lack of mental balance."⁵⁴
30
31
32
33
34

35
36 Thus Gef's power to disturb, to upset normalised and normative modes of action and demeanour, was realised
37 in Sir Cecil's agitation at the luncheon meeting: here the talking mongoose becomes an absent but mobile
38 presence orchestrating modes of intense affect that leave Murray, as witness to this agitation, in a state of
39 concern and doubt. Sir Cecil's impropriety, afforded through Gef's troubling ontology and movement, is
40 paralleled through the accusation that the mongoose had over-turned Lambert's faculties and mental stability:
41 both are seemingly possessed or have come under the influence of Gef's disquieting practices and uncertain
42 status. Moreover, Gef's affective force has become mobile: his monstrosity is able to travel and circulate
43 beyond the Isle of Man to the metropole and the heart of national and public institutions. In other words, the
44 spatial constitution of the monster as mobile is further underlined, as Gef both travels and affects at a
45 distance.⁵⁵ Consequently, the mobile monster must be made stable or denied free travel through settling Gef as
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 a fraud and curtailing his affect; something Levita thought possible through hoping to dismiss Lambert as a
4
5 governor of the BFI and from *The Listener*.
6
7

8
9
10 Murray informed Lambert of the lunch meeting and Lambert wrote to Sir Cecil demanding an apology, but
11
12 received only a note from Sir Cecil's solicitors informing him that they would only offer a formal reply after it
13
14 had been discussed by "high officials at the BBC."⁵⁶ A concerned Lambert began to believe that there was a
15
16 conspiracy to depose him at *The Listener* and he threatened legal action if the lunchtime statements were not
17
18 withdrawn. After a series of meetings with senior BBC officials, including its Chairman Mr. R.C. Norman, failed
19
20 to assuage Lambert's fears that his position was under threat, on the 6th of March he issued a libel writ to Sir
21
22 Cecil Levita.
23

24
25
26 The case opened on the 4th of November 1936 at the King's Bench Division of the High Court before Justice Sir
27
28 Rigby Swift and a special jury. The prosecution alleged that Sir Cecil had slandered Lambert through stating
29
30 that:
31

32
33
34 "Some months ago [Lambert] fell under the influence of Harry Price and has been heard to express
35
36 belief in the occult, notably the talking mongoose. Also he has moved his house three times because of
37
38 pursuit by the evil eye. Things like this have so upset Mr. Lambert's judgment that he is not competent
39
40 as a governor of the Film Institute."⁵⁷
41
42

43
44
45 Furthermore, Sir Patrick Hastings KC, acting on behalf of the plaintiff, argued that Sir Cecil had claimed Lambert
46
47 was "a person of unstable mind who suffered from illusions and whose judgment and critical faculty were not
48
49 to be relied on", "that he was mad", and that he "was utterly unfit for the position that he held."⁵⁸ Thus, the
50
51 transgressive capacity of the monster to upend coherency and the anchors of rationality and judgment needed
52
53 to hold public office, were realised through Sir Cecil's alleged slander. Moreover, the possession of Lambert's
54
55 reason had been affected by the contagious, almost mesmeric, powers of those that dabbled in the occult,
56
57 namely Price; not only did Gef have the power to seize the intellect and lead it in troublesome directions, but
58
59
60

1
2
3 those who investigated the irrational creature had the potential to influence those for whom reason was of
4 paramount importance. Indeed here, once the gates of the occult were open and the rational defences
5 breached, subjects would invariably believe other paranormal influences including the spell or curse of the 'evil
6 eye' and its potential to usher in illogical mobility between houses. The monster travelled with those that
7 encountered it, potentially leading to further nonsensical movement – the monster was thus strangely
8 constituted through both fright and subsequent flight.
9
10
11
12
13
14
15
16
17

18 Throughout the case Lambert was keen to deny his full belief in the existence of Gef, stating "I spoke to people
19 about it. I told it to them as a story, but I certainly never tried to persuade them that it existed."⁵⁹ This attempt
20 to maintain rationality in the face of the irrational never fully succeeded and the monster continued to provide
21 transformative moments throughout the proceedings. Thus, despite attempts to give precedence to the
22 rational and logical through descriptions of the mongoose case as "this rubbish" (Hastings), "this ridiculous
23 thing" (Levita), "just a matter of 'moonshine' and nonsense" (Mr. Beresford KC, representing the defendant),
24 Gef still had the power to travel to, move through and momentarily subvert the official and serious space of the
25 court room.⁶⁰
26
27
28
29
30
31
32
33
34
35
36

37 "MR. JUSTICE SWIFT. – Does a mongoose in the Isle of Man have a tail? (Laughter.)

38 MR. BERESFORD. – On the cover of the book it is given a much bushier tail than the ordinary
39 mongoose."⁶¹
40
41
42
43
44

45 "SIR PATRICK: Did you ever believe in the mongoose? – No, I did not. Did you ever tell anybody you
46 did? – No. Do you now? – No.
47
48

49 MR. JUSTICE SWIFT – You wait until this case is over! (Loud laughter)"⁶²
50
51
52

53 Indeed when Gef was described, "Sir Patrick's recital of these particulars caused considerable laughter in
54 court".⁶³ Gef, who was "quite proud" of his mobile impacts, performed his unsettling actions at a distance as
55 the sobriety of the legal space was made temporally playful.⁶⁴
56
57
58
59
60

1
2
3
4
5 The case lasted for three days with Sir Cecil denying that he thought Lambert mad, but insisting that he thought
6 him “ill-balanced.”⁶⁵ The jury found in favour of Lambert by agreeing that Sir Cecil did speak the words he was
7 accused of, that the words were untrue, and that they were spoken maliciously. Lambert was awarded £7,500.
8
9 The case made the headlines and became known, inevitably, as the ‘The Talking Mongoose’ case. Sir John Reith
10 declared Lambert’s award as “amazing and monstrous.”⁶⁶
11
12
13
14
15
16
17

18 Although the BBC was not directly being sued by Lambert, many at the time saw the case as one man versus the
19 corporation.⁶⁷ Indeed, Justice Swift in his summing up implicitly criticised the BBC, for at least being allowed to
20 be approached by Sir Cecil:
21
22
23
24
25

26 “It was a dreadful thing, when a man in a public position was affronted and outraged and brought an
27 action demanding redress for the wrong which had been done him, that his employers should be
28 approached behind his back and asked to bring pressure to bear on him to settle the matter.”⁶⁸
29
30
31
32
33
34

35 Furthermore, Sir Stafford Cripps MP criticised the BBC in the House of Commons over its handling of the
36 Lambert case, and as a result Prime Minister Stanley Baldwin directed a Special Board of Inquiry to be set up.
37 Headed by Sir Josiah Stamp, the inquiry into ‘certain statements made in the course of the recent case Lambert
38 v. Levita affecting the British Broadcasting Corporation’ delivered its report, commonly known as The Stamp
39 Report, on the 15th of December 1936. Although the report makes no direct reference to Gef, it is possible to
40 read it with Gef as a mobile and coordinating force. In thoroughly detailing the machinations that lead to the
41 Lambert vs. Levita case, Gef’s monstrous mobility exerts a form of pressure on the inquiry:
42
43
44
45
46
47
48
49
50

51 “He [Norman] also spoke of the documents shown to him by Sir Cecil, which had made him
52 apprehensive of the possible repercussions on the B.B.C. if the case came to Court; and indeed Mr.
53 Lambert himself frankly admitted to us that the documents would make an unfavourable impression
54
55
56
57
58
59
60

1
2
3 to anyone who read them without the context and without the knowledge of the circumstances in
4
5 which they came to be written.”⁶⁹
6
7

8
9 Thus the monster, without the contextualisation that would explain (away) and fix his actions (as a fraud, for
10 example) has the potential here for further transgression away from his haunts in the Isle of Man; explanation,
11 interpretation and context were needed else the monster might affect damage to national public institutions –
12 once again action was needed to stem the flow and movement of this unsettling invader of normality. The
13 report thus implicitly recommends that Gef and his irrational co-conspirators be laid to rest in order for a “new
14 start” to be made which would (with “the will on both sides”) lead to “the resumption of normal relations.”⁷⁰
15
16 The Stamp Report made its recommendations which ultimately lead to significant changes in BBC staff relations
17 by giving employees more freedom of expression in their private lives; the institution of salary grades and
18 formal terms and conditions of employment; and allowing for a staff association to represent the voices and
19 rights of employees to be set-up in 1939.

35 **Monstrous disruptions through mobility II: proximity, stasis and materiality.**

36
37
38

39 So far in this paper I have chosen to explore how the monster’s ontology is one that disrupts through a
40 spatiality of movement and mobility. Thus monstrous geographies are produced through an unsettling
41 itinerancy in between and in-the-between of categorical formations (of human/non-human) and affective
42 states (wonder/disbelief, rationality/irrationality), and through a mobility across space (such as acting at a
43 distance upon national institutions). As we have seen, Gef is both close to and different from a variety of
44 normalised categories, and is spatially constituted as both proximate and distant, whilst consistently moving
45 between such states. In this section, I wish to explore how this movement of direction towards *and* away from
46 both the familiar and the strange is further sustained through the mapping of the farm at Doarlish Cashen and
47 representations of the Irvings. In so doing, Gef further underscores the affective and performative power of
48 monsters, and allows us to explore their spatialities in more depth.
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3
4
5 Many others attempted to investigate and record Gef. For example, the Hungarian psychic investigator and
6 psychoanalyst, Dr. Nandor Fodor, spent a week “trailing this fabulous animal in 1936.”⁷¹ He interviewed the
7 Irvings and the local population in attempt to make sense of the phenomenon. Yet by this time Gef was
8 resentful of visitors. Consequently, despite gathering more data on Gef, Fodor failed to ‘bottle’ Gef and could
9 only (initially at least) conclude, “I cannot prove he is an animal. I have not seen him. He did not talk to me. He
10 claimed to be an animal. I cannot disprove that claim”⁷² Moreover and key here, Fodor’s account is caught
11 between, and constantly moves across, certain value judgements concerning the spatialities of the
12 normal/abnormal and the proximate/remote at Doarlish Cashen: “The air, 750 feet above sea level, is
13 remarkably pure and invigorating; its water is excellent. The members of the Irving family are very healthy.
14 They are normal *apparently* in every respect”⁷³ As such, Fodor’s description of the Irving’s normality was
15 framed by an unstated set of assumptions that the monstrous events occurring in Doarlish Cashen could be
16 mapped and environmentally determined by the peripheral and extraordinary spaces in which they resided –
17 he expected the abnormal events to be constituted by an abnormal family in an abnormal space, yet they could
18 not be fixed as such.

19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37 Similarly, Price and Lambert moved between accounts of, on the one hand, the marginal landscape (which
38 would seemingly account for and even necessitate the abnormal events) and, on the other, the incongruous yet
39 suburban normality they discovered: “Their house is remote from the world, on a desolate windswept down –
40 yet they dress, speak and behave as though they belonged to ordinary suburbia”⁷⁴; and “Both the neat parlour
41 and the larger living room are more comfortable and tastefully furnished than one might expect to find in such
42 an out-of-the-way place.”⁷⁵ Thus commentators were caught between recognising the family as comfortably
43 proximate in their normality, and the assumption that the marginal space would be the determining cause of
44 the monstrous. The monstrous Gef is thus geographically constituted through and performs a series of spatial
45 disruptions where an incongruous movement in-between the proximate and distant, the familiar and strange,
46 the expected and unexpected is central.

1
2
3 James Irving, as witness to the monster, became increasingly shunned and labelled the outcast by the local
4 community over the period: "There is an uneasiness in the air in Glen Maye and Peel, when Mr. Irving heaves in
5 sight. He always knows something which people would prefer him not to know."⁷⁶ Echoing the attempts at
6 control by other investigators, naming Irving as the outsider from the 'marginal' space of Doarlish Cashen
7 enacted a spatial discursive strategy that sought to apprehended and stabilise the monster emerging therein.
8 Located, fixed and denied movement in this way, Irving and the monster posed little threat to reason, sense
9 and normality. This geographical arrest is further sought in Fodor's epilogue to the Gef story written fourteen
10 years after his investigations. Here, Fodor argues that Gef was "somehow" the unconscious outpourings of
11 James Irving's "frustrated self."⁷⁷ This frustration is mapped and spatially constituted through the peripheral
12 landscape of the farmstead:
13
14
15
16
17
18
19
20
21
22
23

24
25
26 "As a commercial traveller, originally, his horizons were too wide, both physically and mentally, to
27 reconcile himself to the cabined and confined life of a sheep and goat farmer in a God-forsaken spot
28 where he was constantly struggling against physical starvation."⁷⁸
29
30
31
32
33

34
35 For Fodor, the imprisonment of Doarlish Cashen becomes the cause and explanation of the monstrosity
36 enacted there, as Irving's psyche seeks subconsciously the freedom from incarceration that Gef both offers
37 (through fame) and denies (through infamy). Indeed, this geographical reading sought to explain away the
38 monster as the product of an immobile and spatially limited subconscious. This spatial lack is echoed and
39 extended in turn by Price and Lambert:
40
41
42
43
44
45

46
47 "If we were to construct a theory to account for all of this, we should begin by reminding ourselves of
48 the unusual economic and social environment in which the family at Doarlish Cashen has lived for the
49 past twenty years. Isolation, together with lack of many of the occupations which ordinarily fill up a
50 farmer's time, may produce a disposition towards introspection and a tendency to confuse fact with
51 fancy."⁷⁹
52
53
54
55
56
57
58
59
60

1
2
3 Immobilised in a marginal space, the course of rational judgement is disrupted. In these explanations, Gef is
4 caused by a lack of movement and the outside(r) space in which he emerged: the assumption here being the
5 abundantly mobile Gef provided the escape that the family desire, and hence the monster is constituted in
6 relation to this immobilisation and imprisonment.
7
8
9
10

11
12
13 In these readings, the monster, as mobile across and beyond spaces of immobility, becomes a flight of fancy.
14 Indeed Gef, in recounting his history, claims to have been an extra-mobile beast from the start: he told of how
15 he was born near Delhi, India, on 7 June 1852 and travelled to the Isle of Man via Egypt, where he had seen the
16 Sphinx "Rising out of the sand."⁸⁰ Further travels ensued during his stay in the Isle of Man, as he traversed the
17 island gathering gossip and news for the Irvings – much of which is corroborated by James Irving. Gef often
18 claimed his means of transport involved hiding on the underside of buses, leading local mechanic, Mr. John
19 Cowley, to exclaim: "This animal, or whatever it is, knows a darn sight too much."⁸¹ Irving reported, "Now
20 whatever Gef is, he is a most restless, wandering roamer, travelling all over the place at times, but always
21 returning sooner or later to what he calls home (Doarlish Cashen)."⁸²
22
23
24
25
26
27
28
29
30
31
32
33
34

35 Furthermore, the very manner of Gef's movement was often abnormal:
36
37
38

39 "Out of doors, when walking side by side with Voirrey, his voice appears to be in the air, and not a foot
40 away from the back of my head, and that he is there in body also, I am in no error as he strikes me
41 continuously with small stones. Indoors the voice moves about the house as quick as wireless, so
42 rapidly in fact, that obstructions to his bodily movements do not seem to exist, and there are neither
43 walls, partitions or doors to impede his movements."⁸³
44
45
46
47
48
49
50

51 Equated here with modern media, Gef seemed to embody a curious mode of mobility: he travelled at unnatural
52 speeds and in inconsistent directions.⁸⁴ He seemed to be unbounded by commonplace or normalised modes of
53 movement, and had a "talent for boundless flight, for lightness, frictionless, free mobility."⁸⁵ Thus, Gef's
54 durable, if strange, form morphed into something immaterial, airy and hyper-mobile as he moved. Gef
55
56
57
58
59
60

1
2
3 embodied a monstrous lack of fit through an unknowable mobility: he escaped and he exceeded in his liberated
4 movement the spatial strategies that sought to immobilise both him and his witnesses. Put differently, the
5 story of Gef as monster is not only performed through a defiance of spatial classification, it is a story enacted
6 through the defiance of habitualised movement and mobility. In both his strange movement and as a flight of
7 fancy, the monster emerges through a spatiality of curious mobility.
8
9
10
11
12

13
14
15
16 Gef seems to have been, at times, bound to and emergent through the farmhouse (through his knocks on
17 partitioned walls and 'sanctum'), whilst simultaneously transcending, making mutable its construction and
18 taking flight elsewhere. For example, Price and Lambert mapped the farmhouse and surrounding areas,
19 examining the 'runs' between the panelling and walls through which Gef moved and 'peep holes' through
20 which Gef watched visitors and the Irvings, but all to no avail. This movement in space and his improbable
21 ontology meant that investigations often coalesced around the very issue of Gef's materiality; his substantive
22 nature and the nature of his substance. James Irving commented:
23
24
25
26
27
28
29
30
31

32 "I think I mentioned in a previous letter, that his front feet appeared to be hands. Now on several
33 occasions, I have found the imprint of these hands, or fingers (3) in the fine dust upstairs in a place I
34 know he frequents, they were nearly as long as my own fingers which are short, but not so broad, and
35 they had a fair spread. The animal said, when questioned as to his hands, that they are as large as a big
36 doll's hands, and that he had 3 fingers and a thumb. There was no thumb mark visible in the dust. He
37 can pick up even a small pin, as he has thrown them at me when vexed"⁸⁶
38
39
40
41
42
43
44
45
46

47 Gef allowed Margaret and James to stroke him through a crack in the wall, but "on one occasion, he stroked my
48 wife's fingers so rapidly with his, that his finger nails tore the skin so much that the finger actually bled, much to
49 Gef's distress."⁸⁷ Irving stated how "My wife has often placed a finger in his mouth, and felt his upper and lower
50 teeth and Gef has taken hold of my wife's fingers in his hand. Emphatically, it is a hand, 3 long fingers and a
51 thumb. She says the grip is that of a vice."⁸⁸
52
53
54
55
56
57
58
59
60

1
2
3 In March 1935, Gef deposited some of his hair on the living room mantelpiece. It was sent to Price, who
4
5 forwarded it to Mr. F. Martin Duncan, a Fellow of the Zoological Society. Duncan wrote to Price stating:
6
7

8
9
10 “I have carefully examined them microscopically and compared them with hairs of known origin in my
11
12 collection. As a result I can very definitely state that the specimen hairs never grew upon a mongoose,
13
14 nor are they those of a rat, rabbit, hare, squirrel, or other rodent, or from a sheep, goat, or cow. I am
15
16 inclined to think that these hairs have probably been taken from a longish haired dog or dogs...”⁸⁹
17

18
19
20 On receipt of a clipping of hair from Mona the family sheepdog, Duncan’s suspicions were confirmed – the hair
21
22 samples had the same source. Gef provided more evidence of his materiality through pressing his paws into
23
24 plasticine saying, “I put my foot in it and gave it a twist, but the stuff was hard as hell.”⁹⁰ The casts were sent to
25
26 Reginald Pocock of the Natural History Museum, who concluded that they represented no mammal known to
27
28 him, particularly in the disparity in size of the prints. Gef’s very materiality moved in-between familiarity – the
29
30 hoax of the sheepdog hairs – and the indecipherable – his unknown substance referenced in the paw print
31
32 casts. As such, in both his airy hyper-mobility and his strange matter, he disclosed and moved in-between the
33
34 apparently stable orderings of matter and predicable movements.
35
36

37 38 39 40 41 **The consequences and potential of monsters** 42

43
44
45 “It is said that there is nothing new in heaven or on earth, this maybe, is the preliminary to the discovery of a
46
47 most weird and uncanny species of nature such as has never previously been heard or seen.”⁹¹
48

49
50
51 “Here, then, we have a preposterous case – a palpable absurdity...What are we to make of it? What indeed!”⁹²
52
53

54
55
56 In this final section I wish to explore what to make of Gef and hence to investigate what he performs and his
57
58 significance. Put simply, why is Gef important? What does Gef do for human geographical enquiry of the
59
60

1
2
3 monstrous? Throughout this paper, I have emphasised that the monstrous geographies are constituted by
4 mobility and movement: in-between classificatory states of nature and matter; through and in-between
5
6 fluctuating affective states; in-between periphery and centre; as flight from the imprisonment of place; and
7
8 through hyper and improbable movements. Gef's wider significance lies in his mobility and movement: through
9
10 the monster's mobile constitution and disclosure we find new ways of thinking and habits, and new avenues for
11
12 analysis.
13
14
15
16
17

18 In some accounts, Gef emerges as the classical chimera of different parts, grafting together mongoose and
19
20 human abilities; a hybrid of possible parts and knowable materialities, producing anxiety about what nature
21
22 and matter is capable of and reflecting back on what human beings consist of; "as unknown to nature as the
23
24 centaur or the mermaid."⁹³ Yet as we have seen, Gef exceeds and moves across and in-between the amalgam
25
26 of stable categories of the chimera: Gef is the hybrid of known, possible *and* impossible/improbable parts. He is
27
28 partly natural (performing his 'functions' through cracks in the wall), but he is part spirit (he claimed to be both
29
30 visible and invisible); he is part animal (catching hundreds of rabbits and routing mice from the farmhouse) and
31
32 part poltergeist through his ability to move and throw objects unseen; he is part ghost, part talking animal. Gef
33
34 fluctuates between less-than-material and more-than-natural elements of his constitution. Therefore, Gef the
35
36 monster allows us register the mutability and mobility of matter, how it can morph and move between the
37
38 knowable and unknowable, and how it might never be settled. In this paper, the site of this movement is
39
40 precisely the *and* between mongoose *and* human, poltergeist *and* rabbit killer. By giving emphasis to the
41
42 movement *in the between*, here signalled by a focus on the 'and', the analytical scope of studies of monstrous
43
44 geographies can be extended. We must look therefore to the movement in-the-between to explore the
45
46 geographies of monsters and their spatiality.
47
48
49
50

51 Furthermore, the monster is not just constituted through movement across natural materialities and
52
53 supernatural phenomenon: his ontology is a movement across and in-between accounts (Irving's, Price and
54
55 Lambert's, Fodor's, local newspapers, etc.); his own narration; his abilities (throwing, catching, talking,
56
57 learning); the spaces in which he occurs (familiar and strange, close and distant); his defiance of spatial
58
59
60

1
2
3 classification and his airy hyper-mobility; the traces (in dust in the farmstead, in killed rabbits, in plasticine) he
4
5 leaves; the disturbances he enacts; the imaginations that potentially conjured him; and the affective
6
7 trajectories (of wonder, suspicion, annoyance, and more) he mobilises. Thus Gef reveals himself as hybrid of
8
9 word, agency, flesh, matter, affect, space-time, velocities, modes of mobility and imagination – all of which it
10
11 seems necessary to chart in order to explore monstrous geographies. However, the notion of hybrid lacks the
12
13 sense of mobility that I have argued is so central to this monster's constitution. Subsequently, Gef, and the
14
15 monster more broadly, is better explored spatially as an *itinerant crossing*, following and extending Bennett:

16
17
18
19
20 "I use the image of crossings rather than hybrids in order to avoid the suggestion that the segments of
21
22 the crossing had a previous life in tact. There is a danger that the word *hybridity* conjures up the image
23
24 of static entities coming together to form a compound"⁹⁴
25
26

27
28 Gef reveals monstrous geographies as not just constituted through a relatively stabilised hybrids of knowable
29
30 matter, but as produced through the movement of a whole series or swarm of other constantly melding and
31
32 mutable immaterialities, forces, modes of action and bodies. Monstrous geographies are incessant mobile
33
34 crossings of trajectories that produce affects and effects as "emergent properties, emergent in that their ability
35
36 to make something happen... [being] distinct from the sum of the vital force of each materiality [or force]
37
38 considered alone"⁹⁵ Taken in this way, the monster as an itinerant crossing, allows the apparently stable forms
39
40 of which the monster is formed to be opened out at different speeds and with varying reaches. Gef emerges in
41
42 multiple and incessantly itinerant folds of becoming – becoming-animal, becoming-human, becoming-
43
44 imaginary, becoming-(im)material.⁹⁶ Consequently, in analysing monstrous geographies we must remain aware
45
46 that the events and moments we chart in their emergence amount to thresholds – moments where the
47
48 excessive and constant push of movement pauses or slows down, before opening to other emergent
49
50 movements at different distances. As such, these events become akin to gradations rather than fixed points of
51
52 being, with different intensities and durations, and holding out different capacities to affect and disclose, move
53
54 and reach. Monsters and their geographies are forceful, itinerant, composed through different velocities and
55
56 extent, and always emergent.
57
58
59
60

1
2
3
4
5 Beyond this newfound awareness of itinerant crossings as fundamental to the constitution of monstrous
6 geographies, what further significance does Gef provide? Performing a confounding of habitual categories,
7 Gef's itinerant crossing renders him as Rai puts it, "radically new, for which no cultural code had prepared one
8 for at all."⁹⁷ In affording alertness to the incessant movement of matter and the future, the monster reveals the
9 capacity and potential for new formations exterior to seemingly stabilised relations between forms, categories
10 and things. These occurrences of monstrosity chart events of mobile ontology, wherein difference crosses and
11 morphs into other modes of alterity, and in so doing makes us vigilant to the ceaseless potential for further
12 change. Furthermore, where difference-in-itself is made apparent, questions concerning the ontology of the
13 monstrous can be answered anew. Indeed, the question of Gef 'actual' existence or origin becomes irrelevant
14 or even anachronistic.⁹⁸ Instead, as an incessant itinerant, Gef's "agency has no single locus, no mastermind,
15 but is distributed across a swarm of various and variegated vibrant materialities" and other energetic forces of
16 action, mobility and affect (and more besides).⁹⁹ If, therefore, one were forced into answering the question
17 'was Gef actually real?' one would respond in the affirmative, with the proviso sounding something like 'he was
18 real through his disclosures and affects, and the awareness he brings of the potential for shifting and ever-new
19 conjunctions'. He was and continues to be a playful portent of irreducible becoming. Consequently one can
20 argue, analyses of monsters, and the supernatural and the supernormal more generally, should not seek to
21 seek out ultimate causes or foundational agencies, they should not seek to establish the 'truth' of this or that
22 strange event, but should instead trace their mobile emergence in order enliven our senses to the movement of
23 the new and new movements.¹⁰⁰

43
44
45
46
47 How then can we summate Gef's significance? First, therefore, Gef underscores the importance of not having to
48 seek out the 'reality' of monsters. Second, Gef's power lies in his ability to perform a demonstration. Akin to
49 other monsters, he reveals an opening out and destabilisation of the given: for example, Gef makes matter
50 mobile and suspect to unannounced potential, and underscores the power of monsters to reveal. Third, Gef is
51 the monster as Derrida's arrivant: "the most weird and uncanny species of nature such as has never previously
52 been heard or seen", as the reporter above states. Yet and moreover, Gef reveals the emphasis on movement
53
54
55
56
57
58
59
60

1
2
3 and mobility that underpins the notion of the arrivant: Gef demonstrates that the arrivant, as a force of
4 unforeseeable potential, is *movement itself*. Put simply, movement is potential and potential is movement.
5
6 Through his hyper-mobility, strange reach and incessancy Gef speaks to the itinerant potentiality of crossing
7 and movement, and at the same time, the movement of potentiality. Thus, we should care for Gef's significance
8 because he speaks to how humans and non-humans are always in a mobile state of unrest and unknowable
9 becoming and are caught amidst potential-movement and movement-potential. Gef the arrivant demonstrates
10 that the (always) arriving unknown moves in our midst and, simultaneously, the unknown is a movement of
11 potential. Gef is what Bennett calls the "*creative not-quite-human force capable of producing the new*": that
12 which buzzes and subsists in and between everything is produced through and as movement.¹⁰¹ As other
13 human geographers have shown, and as Gef enhances, the monster allows us think differently about difference
14 and even the future itself.

15
16
17
18
19
20
21
22
23
24
25
26
27
28 Fourth, not only does Gef significance articulate the movement-potentiality of humanness and non-humanness
29 as such, he also highlights how the analysis of monsters should seek to understand their movement and
30 mobility to further underscore claims to their importance. Movement and mobility are both temporally and
31 spatially constituted in that movement can be slow or quick, and more or less extensive in the distances
32 covered. Focussing then upon the movement of monsters is a fruitful line of enquiry, particularly for human
33 geographers. We might then wish to more fully explore the socio-cultural significance of the speed and distance
34 of the mobile monster: for example, analysing the import of the speed at which the Zombie virus spreads, the
35 extent of its travels and its destination. We may also want to explore the slow mobility of the zombie and
36 where the zombie moves to and through, as constitutive of their significance and impact. One might also study
37 how quickly the monster appears or moves into view – how fast some apparent socio-cultural abhorrence is
38 deemed monstrous, for example. Or one might wish to research how mobile this categorisation is and how far
39 it spreads – how a monstrous act, once classified as such, becomes universal or geographically differentiated,
40 the speed at which this labelling occurs and its spatial reach. Movement and mobility in the geography of
41 monsters has potential, like Gef himself.

1
2
3
4
5 Yet fifth, one could argue that Gef is arguably a monster like no other. Indeed, both in terms of speed and
6 duration, and the categorical distances he traverses, such as being part-spirit or ghost as well as his human to
7 nonhuman multiple crossings, he potentially undoes his own status as monster. Hence Gef potentially achieves
8 his undoing precisely because he is abnormally mobile, even for a monster: in his distinctive and ceaseless
9 movement-potential, Gef could be said to be unique. Gef thus has the power to undo absolutes, especially
10 when the notion of the monster moves towards universalisation, whilst simultaneously reaffirming and
11 developing our analytical categories of the monstrous. Gef reaffirms our analytical endeavours to understand
12 him and his ilk, whilst moving beyond and challenging their stabilisation. Thus, Gef is somewhat and sometimes
13 unique – a modification of an absolute that is monstrous through and through.

28 **Conclusion**

29
30
31
32 Through this morphing of parts and abilities – some strangely human, some familiarly nonhuman – Gef as
33 monster cannot be seen as absolute other and cannot be simply distanced as the constitutive outside of the
34 self. The monstrous, as explored here, refuses simple binaries of self and other, of same and (radically)
35 different. Instead, the monster moves across and between the familiarly proximate, the unfamiliar distant, the
36 unfamiliar proximate and the familiarly distant. In his incessant movement in-between and in-the-between of
37 these multiple states, Gef becomes, to cite Dixon, “the absence of relationality”; he “is the refusal of the
38 ordering principle itself.”¹⁰² The talking mongoose as monster supplements or discloses through mobility simple
39 classification and binary operations. In this paper, I have sought to explore how monstrous mobility has an
40 affective and performative power which illuminates and extends what the monster can do. In particular I have
41 emphasised that through incessant mobility the monster’s potential to reveal potential as movement or
42 movement as the unending push of becoming, generation and potential, becomes apparent. As such, we sense
43 the potentiality of relation in Gef’s movements and crossings, and he organises a sensibility that registers the
44 movement of difference and the difference of movement. Moreover, and finally, this paper has argued that the
45

2
3 ontology of the monstrous “operates not in the service of a pre-given end but for the sake of itself as process.”
4

5 ¹⁰³ Gef’s ambiguous status as monster only reaffirms this further.
6
7
8

9
10 Registering the monster means letting go of a settled truth of or for the monster. Yet, and contra to the force of
11 hope that the monster embodies in most human geographical interrogation, this movement always involve a
12 risk. And herein lays the final reason for Gef’s significance for the human geography of monsters. As such, this
13 paper began by describing the monster’s representative power as a warning, and as we shall see this
14 characteristic still holds as we reach the end. These risks are the risks of *whom* or *what* is yet to come. And
15 what or who is yet to come – what might move into view from these crossings – might not always be welcome.
16 The monster can promise new ways of thinking and understanding, but we must still recognise that the
17 monster represents a portent and remain aware of the monster’s power as a warning. In particular, the partial
18 ending to the Gef story reminds us that the power and risk of the monstrous continues to inhere in undermined
19 coherency and a sense of vulnerability amongst witnesses.

32 So, in 1937 the Irvings sold the farm. In 1947 the new owner, former Army Lieutenant L. Graham, snared and
33 clubbed a black and white animal ten yards from the farmhouse. Certain versions of the Gef story conclude
34 with this, yet the animal failed to resemble Gef in size or colour. In July 1970, Walter McGraw, a reporter from
35 *Fate* magazine, tracked down the reclusive Voirrey in England. She reflected that:
36
37
38
39
40
41
42

43 “It was not a hoax and I wish it never happened...Yes, there was a little animal who talked and did all
44 those other things. He said he was a mongoose and said we should call him Gef...but I do wish he had
45 let us alone.”
46
47
48

49
50
51 “Gef was very detrimental to my life. We were snubbed. The other children used to call *me* ‘the
52 spook’. I had to leave the Isle of Man and I hope that no one where I work now ever knows the
53 story.”¹⁰⁴

7
8 With the movement of ambiguity and potentiality of movement comes a warning of possible sadness for, or
9
10 even fear of, what might become or what we might welcome in. This paper ends therefore with a warning so
11
12 befitting of the term monster: they can affect a hope, but also a melancholic, apprehensive or fearful
13
14 disposition to what, or whom, might become. In sum, monsters can move us to wonder and hope, but they can
15
16 still bite.

⁹⁸ We have seen many apparent explanations for Gef in the paper, such as the monster as product of James Irving's immobilised imagination. However, one of the common explanations is that Voirrey was the 'cause' of Gef through ventriloquism (many commentators point to how Gef disappeared when Voirrey was not there). Other explanations point to Voirrey's loneliness (her brother, who helped build the farm, and her other sister both lived in the UK at the time) or even her 'hormonal state' as a (pre-)pubescent girl. This latter is a common explanation of supernatural phenomenon (see for example The Enfield Poltergeist case) and echoes ideas of monstrous femininity. See B. Creed, *The Monstrous-Feminine: Film, Feminism, Psychoanalysis* (New York, Routledge, 2007); M. England, 'Breached Bodies and Home Invasions: Horrific representations of the feminized body and home', *Gender, Place and Culture: A Journal Of Feminist Geography* 13 (4) (2006), p. 353-363.

⁹⁹ *Ibid*, quotation p. 96

¹⁰⁵ Gef continues to move imaginations and is still not at rest. A Facebook group 'Gef the talking mongoose' has 702 members (<https://www.facebook.com/groups/11118503209/>, Last accessed 16th March 2016) and is very active; a YouTube video of a 'pilgrimage' to Doarlish Cashen has had 16,500 views (<http://youtu.be/OFBvGS3ymdc>, Last accessed 16th March 2016); and Gef is the subject of a forthcoming biography (to be published by Strange Attractor Press) by Christopher Josiffe who works as a cataloguer at Senate House Library, University of London.

Acknowledgements

I would like to sincerely thank Tim Cresswell for his advice and persistence with the paper, and the anonymous referees whose insight and comments were both insightful and very helpful. I would also like to thank Miss S for putting up with me and my obsession with a talking mongoose from the Isle of Man, and for being an excellent informal research assistant on a 'pilgrimage' to Doarlish Cashen in 2010.

Author biography

Julian Holloway is a Lecturer in Human Geography at Manchester Metropolitan University. He writes on religion and spirituality, and is interested in geographies of the Occult and Fortean.
