Author Correction: Long-term carbon sink in Borneo's forests halted by drought and vulnerable to edge effects

Lan Qie et al.#

Correction to: *Nature Communications* https://doi.org/10.1038/s41467-017-01997-0, Article published online 19 December 2017

The original version of this Article contained an error in the third sentence of the abstract and incorrectly read "Here, using long-term plot monitoring records of up to half a century, we find that intact forests in Borneo gained 0.43 Mg C ha^{-1} $year^{-1}$ (95% CI 0.14–0.72, mean period 1988–2010) above-ground live biomass", rather than the correct "Here, using long-term plot monitoring records of up to half a century, we find that intact forests in Borneo gained 0.43 Mg C ha^{-1} $year^{-1}$ (95% CI 0.14–0.72, mean period 1988–2010) in above-ground live biomass carbon". This has now been corrected in both the PDF and HTML versions of the Article.
