Impaired Cerebrovascular Reactivity in Patients With Atrial Fibrillation

In the following sentence, the MCAv\text{mean} values for AF patients who were fibrillating was incorrect.

AF patients who were fibrillating when studied (55% of total) had a lower MCAv\text{mean} (31.1 ± 8.7 cm s\textsuperscript{-1}) than those not fibrillating (59.2 ± 10.5 cm s\textsuperscript{-1}) (\(p < 0.001\)).

The MCAv\text{mean} values for AF patients who were fibrillating should have been 44.4 ± 10.9 cm s\textsuperscript{-1}. The correct sentence is as follows.

AF patients who were fibrillating when studied (55% of total) had a lower MCAv\text{mean} (44.4 ± 10.9 cm s\textsuperscript{-1}) than those not fibrillating (59.2 ± 10.5 cm s\textsuperscript{-1}) (\(p < 0.001\)).

The authors apologize for this error.
