Lessons of the Past, Tools of the Future

A Computational Decipherment of Linear B

Katie Paxton-Fear

PhD student in Defence and Security

Cranfield University

K.Paxton-Fear@cranfield.ac.uk

Creativity is Limitation

- Limitation: Follow the steps of the original decipherment
 - “Standing on the Shoulders of Giants”
- A different approach to a interdisciplinary project

Background

- Linear B was found on Crete and at select places on the mainland
- It is a syllabic language
- The language was used administratively
- Related languages
 - Linear A, Cypro-Minoan, Cretan Hieroglyphs, Classical Cypriot

A Recipe for Decipherment

1) Correctly classify and transcribe tablets

Completed by Emmett L. Bennett Jr.

2) Find evidence of inflection

Completed by Alice Kober

3) Create a grid of characters

Completed by Michael Ventris

4) Begin assigning likely values to the grid

Completed by John Chadwick & Ventris

	A	E	I	O	U
VOWEL	𐀀	𐀁	𐀂	𐀃	𐀄
D	𐀅	𐀆	𐀇	𐀈	𐀉
J	𐀊	𐀋		𐀌	𐀍
K	𐀎	𐀏	𐀐	𐀑	𐀒
M	𐀓	𐀔	𐀕	𐀖	𐀗
N	𐀘	𐀙	𐀚	𐀛	𐀜
P	𐀝	𐀞	𐀟	𐀠	𐀡
Q	𐀢	𐀣	𐀤	𐀥	
R	𐀦	𐀧	𐀨	𐀩	𐀪
S	𐀫	𐀬	𐀭	𐀮	𐀯
T	𐀰	𐀱	𐀲	𐀳	𐀴
W	𐀵	𐀶	𐀷	𐀸	
Z	𐀹	𐀺		𐀻

Finding Inflection: Original Work

- Kober originally found evidence that Linear B was inflected
- Kober's algorithm
 - Select **words which are followed by ideograms and numerals**
 - Find the same **word in different contexts**
 - Find **predictable patterns** where the word endings change

	Type A		Type B		
Case I	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢
Case II	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢	𐀮 𐀶 𐀭 𐀢
Case III	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢

	Type C	Type D	Type E
Case I	𐀮 𐀶 𐀢 𐀢	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢
Case II	𐀮 𐀶 𐀢 𐀢	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢
Case III	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢	𐀮 𐀶 𐀢

Finding Inflection: Computational Approach

- A visual representation
- Loop through each word
 - Loop through each word
 - If the word is exactly the same – ignore
 - Else
 - Loop through the characters in word 1
 - Does this character match the character in word 2
 - Increase the similarity
 - Else – stop, these words are dissimilar

walk	[w,a,l,k]
talking	[t,a,l,k,i,n,g]
walking	[w,a,l,k,i,n,g]
wanting	[w,a,n,t,i,n,g]
walked	[w,a,l,k,e,d]

Loop	Word 1	Word 2	Similarity
1	walk	walk	0
2	walk	talking	0
3	walk	walking	4
4	walk	wanting	2

Loop	walk	wanting	Similarity
1	w	w	1
2	a	a	2
3	l	n	2

Finding Inflection: The Results

```
po-ti-ni-ja Confirmed? true
-po-ti-ni-ja-we-jo
-po-ti-ni-ja-we
-po-ti-ni-ja-wi-jo
u-ru-pi-ja-jo Confirmed? false
-u-ru-pi-ja-jo
a-ko-so-ta Confirmed? false
-a-ko-so-ta
-a-ko-so-ta-o
po-ro-u-te Confirmed? false
-po-ro-u-te-u
-po-ro-u-te-we
```

Creating the Connections: Original Work

- Kober showed how characters are connected
 - Computerise this process
- Predictable patterns, evidence of inflection
- Then this is plot on a graph

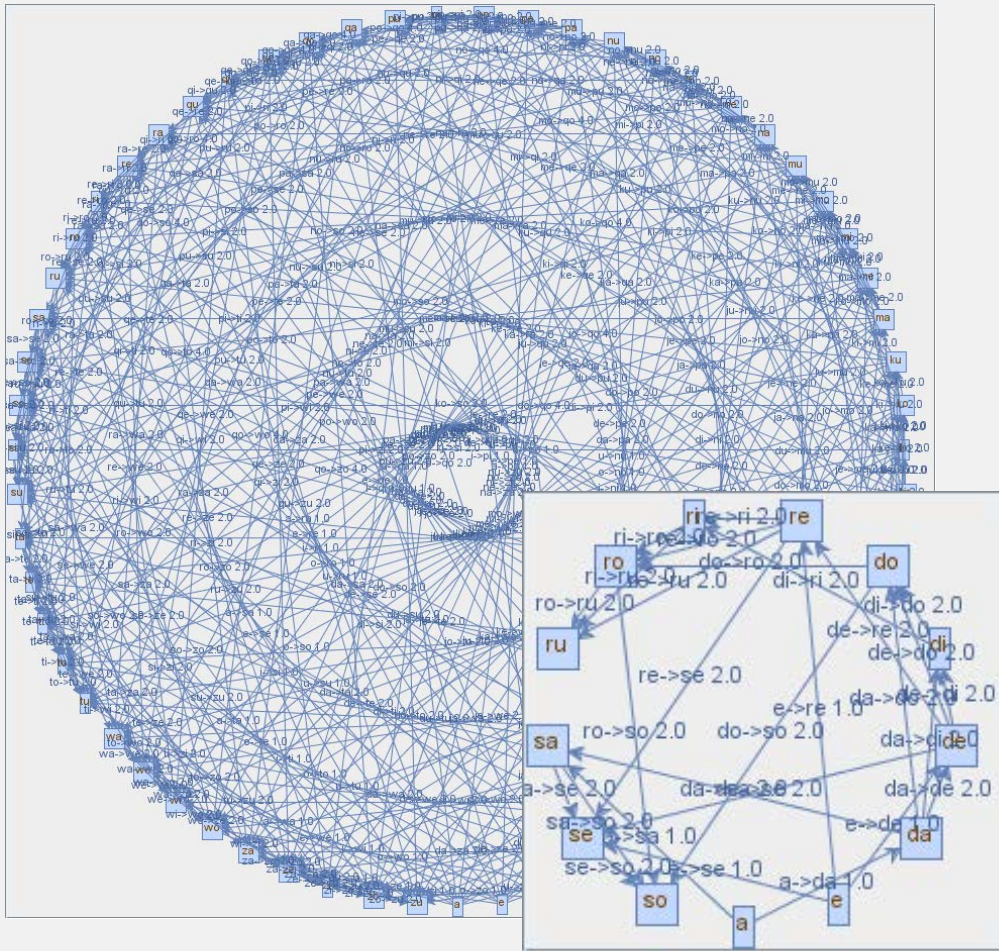

Ser-vu-s(a) -> Servus
 Ser-vu-m(a) -> Servum
 Ser-vi -> Servi

Same word -
 different case

First characters are the same, next character is the same, the next character likely shares a consonant
 character likely shares a vowel

	Type A				Type B											
Case I	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷
Case II	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷
Case III	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷	𐌸	𐌺	𐌶	𐌷

Creating the Connections: Results

- Graph
 - Node -> A Linear B character
 - Edge -> A shared vowel or consonant
 - Weight -> How often it appears
- Seed the graph with likely values
 - da, ma, mi, ni, so, do, su, du
- Plot onto a table

Final Grid

	a	e	i	o	u
M	ma	me	mi	mo	mu
N	na	ne	null	no	nu
D	da	de	di	do	du
J	ja	je	ni	jo	ju
K	ka	ke	ki	ko	ku
P	pa	pe	pi	po	pu
Q	qa	qe	qi	qo	qu
R	ra	re	ri	ro	ru
S	sa	se	si	so	su
T	ta	te	ti	to	tu
Z	za	ze	zi	zo	zu
W	wa	we	wi	wo	null

Conclusion

- It is possible to replicate the decipherment of Linear B computationally
 - Different approach than typical Machine Learning decipherments
- Working with limitations can encourage creative solutions
- Interdisciplinary projects are great sources of personal growth

Thank you for listening
