Life without Fatherhood

Robin Hadley (PhD pending)

r.a.hadley@keele.ac.uk

@RobinHadley1

Background

- Based on qualitative PhD research project:
'Life without fatherhood: a qualitative study of older involuntarily childless men.'
- Aim to explore the experiences of involuntarily childless men aged over 50.
- Methodology draws on Chambers (2002) *'feminist life course perspective'* informed by: critical gerontology, life course, & (pro)feminist approaches. Underpinned by social constructionism and focus on biography.
- Broad Thematic Analysis. (Braun & Clark, 2006)
- My PhD studentship was funded by Keele University.

The sample

- 14 men were interviewed in 2012: 27 interviews in total.
- 13 White-British; 1 Anglo-Celtic Australian.
- Age range: 49 – 82 years.
- 2 non-heterosexual, 12 heterosexual.
- 7 single (5 solo living), 7 in relationships (6 living together; 1 LAT).
- 6 drew pensions, 3 worked full time, 4 seeking work, 1 DLA.
- I acknowledge that terms like 'childfree' 'childless' 'voluntary' 'involuntary' 'infertile' 'old' 'older' 'elderly' 'gay' 'straight' and others I may use are contentious.

The Package Deal*: Ideal Masculinity?

* (Townsend, 2002)

Childlessness

- Most societies are pronatalist: childless labeled as 'other'.
- Majority of research focuses on the 'involuntary' as it is based on those accessing infertility treatment.
- Potential or actual infertility has major implications for physical & mental health, socio-economically, identity & well being.
- Men reported as 'not interested' by infertility researchers. (Lloyd, 1996).
- Difficult to assess the level of involuntary childlessness because people who do not access treatment are not recorded.
- Men's fertility history is not collected: it is not possible to assess the level of childless men in the UK. (ONS, 2014; Cohort Fertility background notes).

Ageing and childlessness

- Recently ageing research has focussed on older women because: they lived longer, had high chronic co-morbidities, received more state benefits and home care service. (Arber 2004, Arber et al, 2003)
- Older childless adults: *'rendered invisible in social science literature.'* (Dykstra and Hagestad 2007: p. 1275)
- Surveys indicate older childless adults have an increased risk of loneliness, social isolation, depression, and ill health. (Dykstra and Hagestad, 2007)
- Formerly married childless men showed poorer physical health, sleeplessness, excessive drinking and smoking, and depression than men with partners. (Kendig et al, 2007)
- Linked to *'emotional instability and willingness to take risks.'* (Weitof et al, 2004: p.1457).

The invisible older men

- As a group were viewed as advantaged: economically stable, no mortgage, married, and recipients of spousal care.
- Research on pensions & income have focused on differences in women's marital status (Arber, 2004).
- Older men died at an earlier age than women.
- Men are seen as reticent in accessing health care.
- Partner-less older men are more likely to be placed in residential care than equivalent women.
- Seen as socially reticent and therefore difficult to access for research on personal matters. (Arber and Davidson, 2003; Perren et al., 2004; Arber et al., 2007).

Social context: 'The package deal'

"I just naturally, in growing up, rather assumed I would leave school, do university, get a job, get married, and have a family." David (60)

"I always imagined I would have children." Harry (70)

"I think from about like 15 years old I knew I was gay, so in my mind even then I knew I would never get married. So I suppose I didn't even think too much about children because you don't get married them days you didn't have children." Raymond (70)

Pathways to childlessness

- **Economics:** *“The bloody interest rates hit 13% - so that made me delay, you know, overtures in those directions.” John (59)*
- **Social clock:** *“Nobody wants a 70 year old father when you’re 20.” Martin (70)*
- **Biological clock:** *“We just don't want to let time go by and let nature take the decision for us.” John*
- **Health:** *“IVF was very stressful for my partner so, after two cycles, we called it a day basically.” Edward (60).*
- **Relationship:** *“She said, “I never thought you are responsible enough to have children” Which, I guess, is the time I started drinking seriously.” John*

Affect of childlessness

Regret: *“I’ve never discussed it (IVF). If people ask if we have children I say “regrettably no.” I quite like people to know we did want a family.”* Edward (60)

Peer network: *“It is noticeable that friends who have children drift away.”* Edward

Existentialism: *“I think having kids is a way of producing a sense of continuity. Otherwise, death feels very final. If you're leaving kids, you've left something of yourself.”* David (60)

Advantages: *“The advantages then, of course, are not having to plan and worry about others.”* Edward

Alienation and Isolation

Alienation: *“When couples get older, they have a whole raft of experiences, you know, first day at school - if you haven't had those experiences you're shut out along with everything else. You're on the fringe - you haven't experienced: that is alien to you.” Russell (55)*

Isolation: *“People have no conception of just how isolated someone who hasn't got kids in middle age is. That's point number one to get through in your bloody PhD.” Russell*

Negotiating Package Deal disruption

“I seem to think more and more I think, now and again, it would suddenly hit me “Ah” you know? I would see the relationship between a father and son, or or a father and a daughter, and I was thinking “Ah” I’m never really going to get that, you know ... I miss that.” George (60)

“It’s something I will never stop regretting. You know, it won’t go away.” Martin (70)

“How is a man supposed to be a man?” Frank (56)

“I’m never going to be able to say, “This is my grandson” am I?” Harry (64)

Social networks and ageing

- Relationships and social support are as important as physical health towards well being & preventing isolation & exclusion. *(Victor and Scharf, 2005)*
- Network size and type affect health: those with least resources tend to have poorer health behaviours. *(Wong and Waite, 2015)*
- Marriage is important to well being in later life – if the relationship is ‘good’. *(Wong and Waite, 2015)*
- Older men especially see their partner as a primary source of care and support. *(Arber, 2004; Arber and Davidson, 2003)*
- Older men are more likely to have very small networks of one person or less compared to women. *(Phillipson et al 2001)*

Networks

Continuity of family dynamics

Colin: *“I have a great relationship with my partner and my brothers, they are most important. My family was, and is, extremely close. Very happy, and fun, childhood.”*

John: *“My childhood [...] I was not abused as such, but it was aversive [...] even now, my mum, it’s still a bloody monster. My middle brother I can't have any respect for him at all. I’m in contact with me brother [youngest]. Cousins, I would be hard-pressed to recognise - it's been so long. So now relative strangers.”*

Partnered - bereaved

Martin: *“I think my wife and I are very much for each other, so we tend to be our own social field. How do we socialise? Family. Of course it’s my wife’s family, ‘cos I’ve not got any. And that’s really just her siblings saying, “Let’s visit”, and the surrogate grandchild.”*

Harry: *“There’s no inner circle, no. [...] Loads of activities around here from people we knew. I’ve dropped out of that because I hate going on my own. [...] A problem – I’ll solve it. I’m the only one - I don’t know anyone. [...] There’s two long time mates that I got that, if I rang, would come at a click.*

Social networks and childless people

- Older childless are not disadvantaged when their health is good. If health deteriorates the informal support declines and the formal care does not take up the shortfall. *(Albertini & Mencharini, 2014)*
- Partner-less older men are more likely to be placed in residential care than equivalent women. *(Arber and Davidson, 2003)*
- Concern over older men's isolation has led to projects such as 'Men in sheds' & 'Hen Power'.
- 'Out in the City' 50+ type groups offer support to older LGBT people.
- More-to-Life: support network for people post unsuccessful IVF treatment.

Grandfatherhood 1 & 2

Latent: *“I mean I think in a way of the two little ones in the pub as the grandchildren I’ve never had. I don’t say that in the pub to anybody, I don’t even let them know it, or their Dad.” Raymond (70)*

Adopted: *“They asked if they could adopt me as a granddad. That lasted 3 years - it was great. I felt I belonged - that’s what I miss.” Alan (82)*

Grandfatherhood 3 & 4

Proxy: *“Liz’s grandchildren appeared on the scene - I discovered what a pleasure that is, you know? I’m keenly interested in them, as I would be if they were my genetic grandchildren, I think. Liz’s ex-husband, he’s ‘Granddad’, I am ‘Pappous’ - the Greek word for Grandfather.” James (65)*

Surrogate: *“I said to the parents, “You know, this baby when it comes hasn’t got a paternal grandfather. Can I be a surrogate grandfather?” Which I am. They call me ‘Sgrampy’, which is an ‘orrible word, but its surrogate grandfather, surrogate grampy. Pat is ‘Gruntie’ because she’s actually a great aunt. And particularly, I say, the surrogate grandchild, is a big part of the social thing” Martin (70)*

Organisations influence on social networks

Alan: *“There is a core of people that is my relatives and some o' the closer people from the group. The ones that 'ave been there probably from the beginnin’.”*

Raymond: *“I've the people at the pub and I've got the group. With the group, if you're not well [...] I ring and then they know I'm not just, sommat's happened, I've not gone. I had a couple of phone calls back, see if I were alright, you know. You think, “Well somebody cares,” you know? [...] It's most of my life - going to the pub or the group. So, I mean, you take that away from me and just sit here forever? Then might as well curl up and die now, you know?”*

Future

Health: *“Who's gonna take us to the hospital? Who's gonna push us? When we fall on the floor, who's gonna pick us up?” Michael (63)*

“You're suddenly aware you're no longer invincible.” John (59)

Threat: *“I don't want people saying, “Oh, he's a bit of a paedophile, this one, looking at the kids”.” Raymond (70)*

Biological lineage: *“If you don't have children, you're not gonna have grandchildren.” Frank (56)*

Legacy: *“There is a richness of family history, which it's nice to pass on, again no one to pass it on to.” David (60)*

*“So, when the last of us dies then the estate skips a generation.”
David (70)*

Ageing masculinity

'How is a man supposed to be a man?' Frank (56)

Stereotypes: provider, active, virility, strength, heterosexual, non-feminine, emotionally distant, subordination of others = Hegemonic masculinity 'Ideal' type.

Hegemonic masculinity: Domination of society/social relationships through patriarchy: Few men achieve the hegemonic ideal. *(Connell, 1995)*

Emergent Masculinity: Men now behaving in ways that counter/reject the hegemonic masculinity ideal/the old ways. *(Inhorn, 2012)*

Mosaic masculinity: Older men adapt parts of masculine scripts to form their masculine identity. *(Coles, 2008)*

Ageing Without Children (awoc.org)

- Grass roots organisation campaigning for the recognition of 'AWOC' people. Includes those childless by circumstance, choice, bereavement, disruption, & self defined.
- More people now in their 40s will age without children than ever before; estimates are between 20-25%.
- The population of older people in the UK is increasing.
- Assumption in health and social care policy and practice that older people will have family members to fill the gap left by the state.
- The ageing childless are not recognised in policy and practice documents.
- Seeking funding to conduct more research.

Thank you for listening: any questions?
